

## Instructions for “Create” PT Video

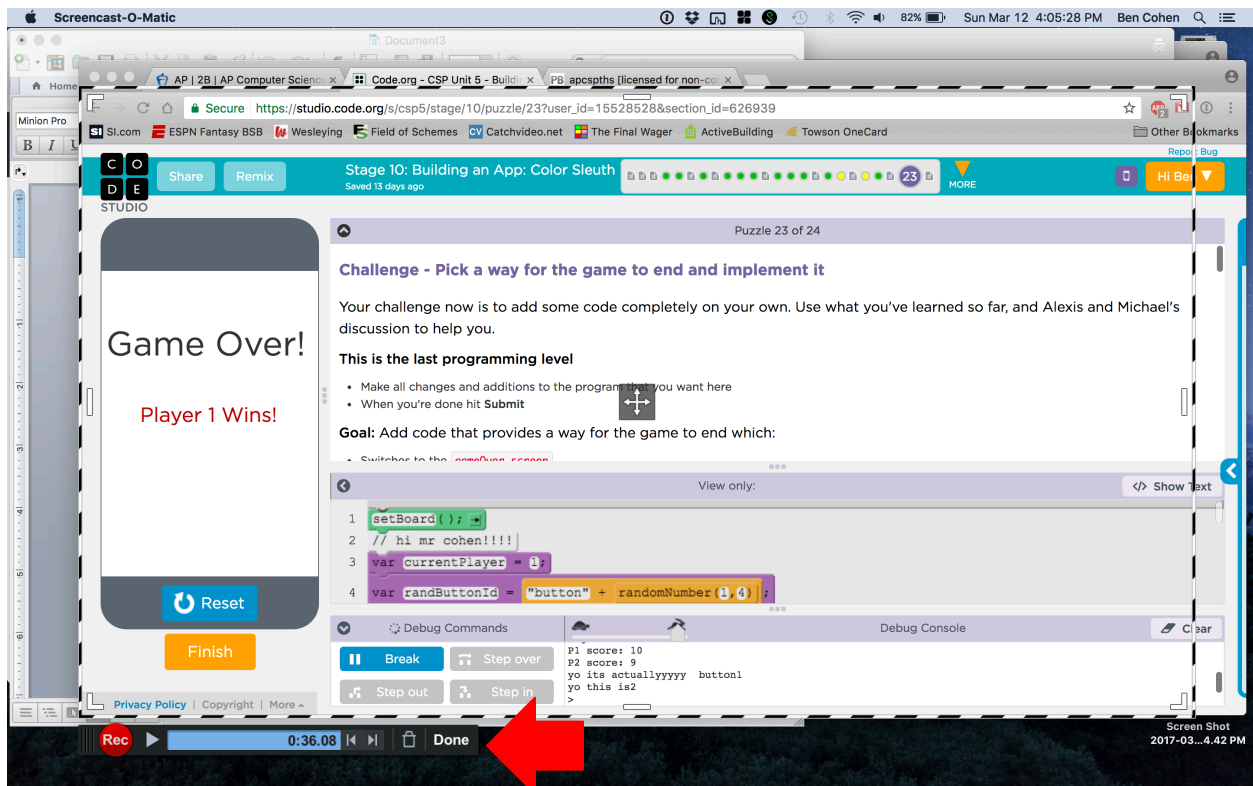

1. Visit [www.screencast-o-matic.com](https://www.screencast-o-matic.com) and click the blue “Start Recording” video.
2. Click the green “Launch Recorder” button on the following screen. (Note: I had some problems running the web-based recorder using Chrome on a Mac. If you encounter difficulty, click the “Download the full app install” link below the blue “refer friends” bar—it’s the first of the FAQs.)
3. Make sure the IDE (e.g., the Code.org page or NetBeans window) is inside the black-and-white box. Ensure “Screen” is highlighted in the box in the lower-left corner.
4. Click the microphone icon to the right of “Narration” (in the box in the lower-left corner) and select “None” from the menu that appears.

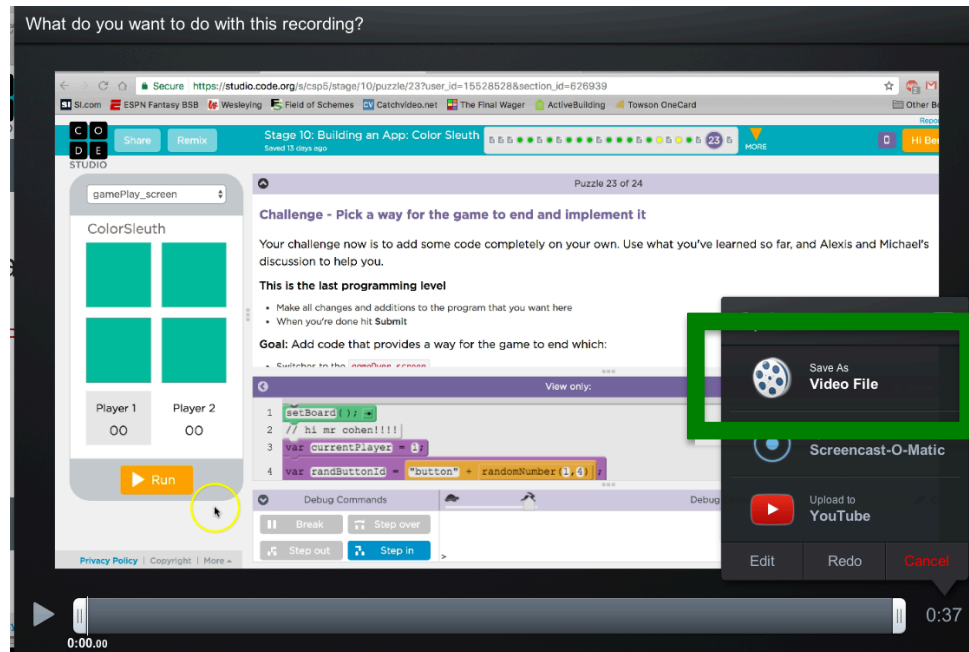

5. Click the red “Rec” button in the lower-left corner. **Remember that your video cannot exceed one minute!**

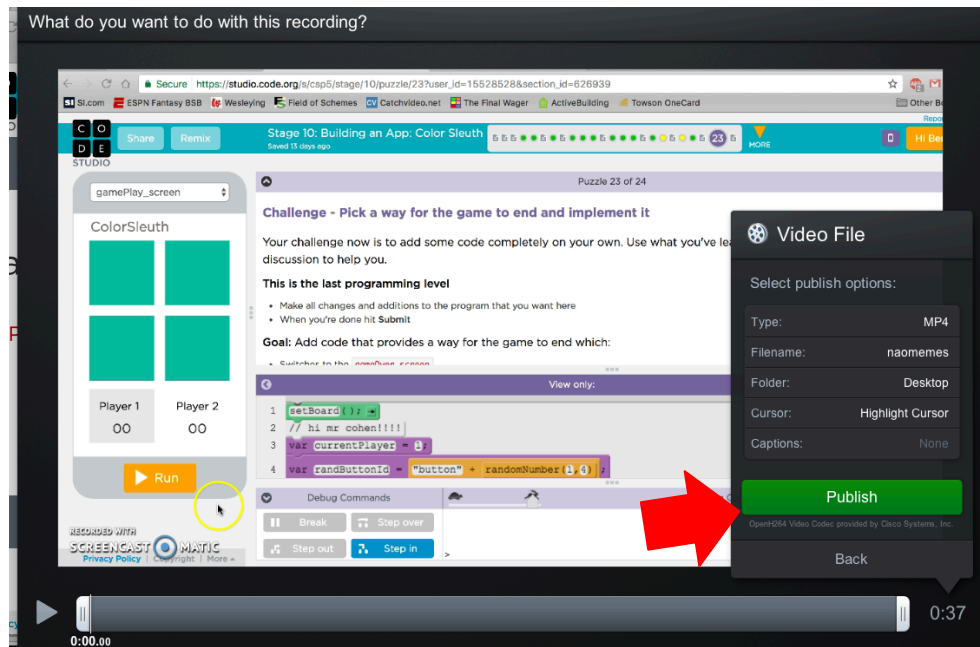

6. When finished, click the blue pause button in the lower-left corner, then click “Done.”

7. Click “Save As Video File” in the “Options” menu. **Do NOT** upload to YouTube!

8. Save your file as MP4 or AVI—remember that it cannot exceed 30 MB in size. Click the green “Publish” button to save.

9. After the file saves, click “Done.” Screencast-O-Matic will automatically close.  
10. Upload your video through your AP Digital Portfolio (see the guide on PBworks).
